

**CG FLOORING SYSTEMS LTD**  
Specialists in Industrial Flooring

# Industrial Flooring Specialists

Upgrading floors for prolonged life & improved performance

# Industrial Flooring Specialists

**CG Flooring Systems Ltd** is an industrial and commercial flooring company specialising in the repair and refurbishment of concrete slabs, and applied finishes. We offer a wealth of experience, expertise, and knowledge to prolong the life of worn, damaged concrete floors and help them to better support operations.

# Floor and Joint Repairs

A fully functioning concrete floor slab with no surface defects or floor joint damage is essential for efficient warehouse operations. Our slab repair services include:

- Joint Arris Repair - for the reconstruction of arrisses.
- Joint Arris Reseal - replacing defective sealant for the protection of arris edges.
- Crack Repair – reducing or preventing further damage, minimising future maintenance costs.
- Other Repairs - from bolt top-offs to full depth dowelled slab repair.

## CoGri Joint Stabiliser

**CG Flooring** presents **CoGri Joint Stabiliser**, designed to restore positive load transfer at concrete floor joints and eliminate rocking slabs. Quick and clean to install, floors can be used immediately.

Advantages of this solution include being cost-effective with minimal impact on operations, helping improve operational efficiency and productivity, plus reducing the risk of accidents, personnel injuries, and damage to stock.

## Floor Maintenance and Due Diligence Surveys

We use due diligence surveys to assess the condition of existing concrete floors. Paying particular attention to joints, flatness, loading, and durability. Our team of experts will then make recommendations on necessary repairs and maintenance strategies.

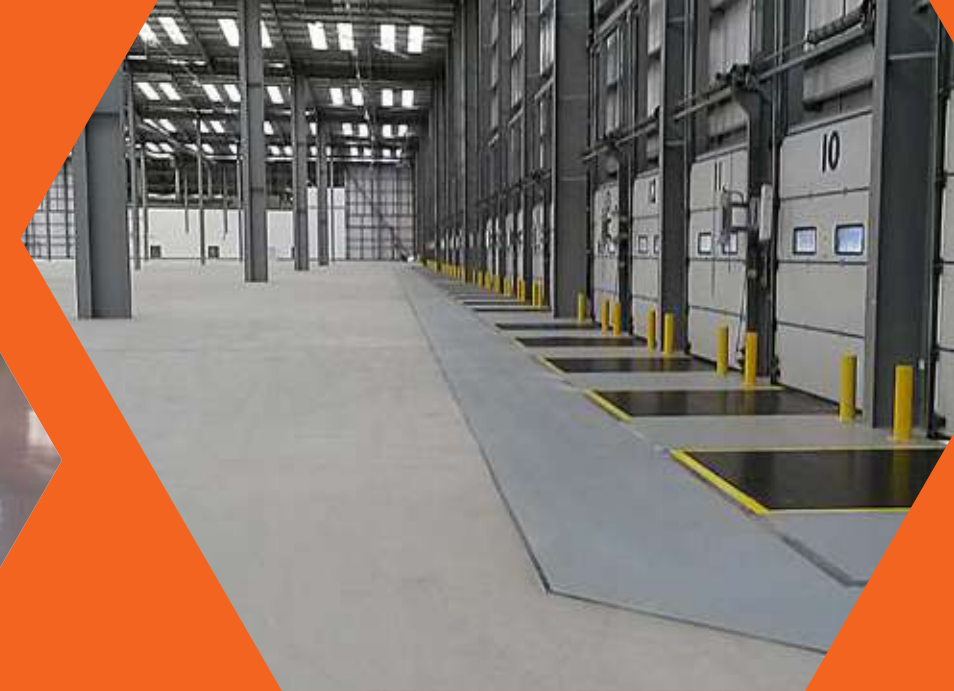

# Floor Remediation for Automated Warehouses

Floors for automated warehouses must meet requirements specified by robotic manufacturers. A flat floor is essential, but not all warehouse floors are designed to work well with robotic systems. Some may also be required to meet clearly specified characteristics like surface micro-roughness, surface resistivity, gloss, and friction. CG Flooring Systems has the knowledge and technical understanding to deliver these requirements.

Analysing data provided by a specialist floor testing company, CG Flooring Systems can deliver a suitable corrective remediation plan for the floor. This will typically involve either a grinding process or CoGri Fastfloor-IT screed system to bring floors into compliance with the desired flatness specification.

We can also repair joints and surface defects to provide the best possible surface for the automated system to run on.

## FASTFLOOR-IT Industrial Floor Screed

Our **FASTFLOOR-IT** Cementitious Pump Screed is a cost-effective Industrial Topping (IT) solution to upgrade old concrete floors with minimum impact on the ongoing operation. It is a fast curing and self-smoothing system, providing an extremely hard-wearing surface for use in industrial areas with high volumes of traffic.

**FASTFLOOR-IT** can also be used to bring floors into compliance with floor flatness specifications for Free Movement (FM) floors, including automated and robotic systems.

# Resin Flooring Systems

Services include resin sealer, resin floor coating, epoxy and polyurethane resin screeds, available in standard, decorative, and anti-slip finishes.

Our experienced team will work with you to ensure that the resin system you choose is the most suitable and cost-effective to meet the demands of your operation.

**CG Flooring** understand that the success of all resin flooring systems is down to the detailed surface preparation carried out prior to the application of the resin. We always pay particular attention to the condition of the joints and surface of the slab to ensure you get the best possible experience from your resin floor.

## Demarcation Lines

**CG Flooring** provides quick and efficient services for the installation and removal of demarcation lines, to meet your operational and safety needs.

Our demarcation line marking can be adapted to almost any requirement, including forklift traffic routes, walkways, hatching, numbers, letters, pallet lanes, and safety markings.

## Polished Concrete

Our polished concrete flooring service delivers durable, attractive, dust-free, and easy-to-maintain surfaces for new or old concrete slabs. Available in a variety of finishes, polished concrete can also be considered transformative as we upcycle your existing floor surface to create something practical yet unique.

## Specialist Products

**CG Flooring** carry a range of CoGri specialist floor repair and maintenance products, available to purchase. These include our range of rapid curing joint & crack repair products, and joint sealants. Ideal for getting you through an emergency repair requirement until you can call in the specialists.

## Surface Preparation

The key to a great industrial flooring system is detailed and effective surface preparation. We use modern, vacuum-enhanced diamond grinding, captive enclosed shot-blasting, or other techniques before the application of cementitious screeds and synthetic resin floor systems.
